Interpretasi	Positive (Probable Omicron)		

Disclaimers :

Catatan:

- Hasil pemeriksaan dikerjakan dengan metode RT-PCR dan hanya menggambarkan kondisi saat pengambilan spesimen.
- Hasil PCR Negatif tidak selalu berarti pasien tidak terinfeksi oleh pathogen, namun hanya menunjukkan bahwa material genetik pathogen tidak ditemukan di dalam sample
- Jika hasil PCR positif atau timbul gejala klinis setelah pemeriksaan, silahkan hubungi dokter atau fasilitas kesehatan terdekat.
- Hasil PCR tidak dapat dibandingkan antar satu laboratorium dengan laboratorium lain, karena perbedaan alat dan target gen yang digunakan.
- Surat ini dikirim dan ditandatangani secara elektronik

Note :

- The above examination results were carried out using the RT-PCR method and only described then condition at the time of specimen collection
- A negative PCR result does not necessarily mean that the patien is not infected with the pathogen, but only indicates that phatogenic genetic material is not pressent in the sample
- If the PCR result is positive or clinical symptoms appear after the examination, please contact the doctor or the nearest health facility.
- PCR results cannot be compared between one laboratory and another, due to differences in then tools and target genes used.
- The letter is sent and signed electronically
